Running the system so far.

- Method 1: Copy the directory "Group Creator Project 3716" from this commit to the workspace for Eclipse. Then the project can be opened in Eclipse and run with Eclipse.
- Method 2: Open console window and navigate to the directory "Group Creator Project 3716". Then enter "java GroupGUI" to run the program.

Non-Java files:

- "ClassList.txt" is a file that replaces the university systems for fetching a student list. This file is required to get the list of students.
- "CompletedGroups.txt" is generated when the program and groups are created. It stores a list of the completed groups.

Iteration plans for Friday November 28th:

- Add support to get student GPAs from an outside source.
- Add login system for student or professor options.
- Give professor boolean option to use GPA when creating the groups.
- Give professor ability to edit created groups.
- Give ability to finalize and publish groups.
